

Hair testing from a leader in science and service

Hair testing provides a longer detection window,
and can lead to a higher positivity rate, making
it an excellent deterrent of drug use.

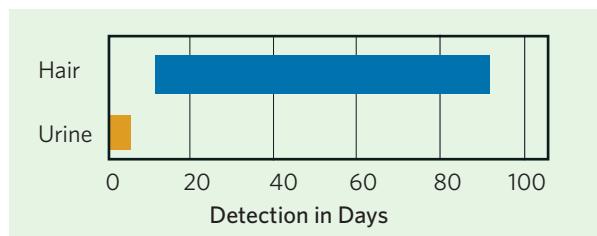

Why choose hair testing?

Hair testing provides up to a 90-day detection window for repetitive drug use patterns, helping to ensure a long-term drug free applicant employee. Our hair tests screen for a wide variety of drugs, including expanded opiates, creating a broad and robust drug testing menu.

Hair testing collections are observed, reducing the likelihood of tampering or adulteration. Using an FDA-cleared testing system, hair testing yields excellent detection of repetitive drug use, making it a valuable resource for an employer's pre-employment and random drug testing program.

Negative hair test results are typically reported within 24 hours of specimen receipt at the laboratory and positive results are confirmed using gas chromatography/mass spectrometry (GC/MS) or gas chromatography/mass spectrometry/mass spectrometry (GC/MS/MS) and are usually returned within 48 to 72 hours.

90-Day Detection Window

The Advantages of Quest Diagnostics Hair Testing.

- **Longer Window of Detection**
Hair testing provides up to a 90-day detection of repetitive drug use, which can act as a powerful deterrent and often yields higher positivity rates compared to that of urine or oral fluid tests.
- **State-of-the-Art Science**
A dedicated hair testing laboratory, team of scientific experts and proven technology mean no other lab provides more dependable results than Quest Diagnostics.
- **Unmatched Access**
Our national and international collection site network delivers a convenient, consistent and professional collection experience.

Our envelope has an RFID (radio-frequency identification) tag for control and safe handling.
- **Personal Service and Support**
Knowledgeable customer service representatives are here to answer questions and ensure your program runs smoothly.
- **Complete Testing Program**
Only Quest Diagnostics offers hair, urine, oral fluid and instant testing, allowing you to create a customized, multi-specimen testing program, all through a single, convenient provider.

Test for a wide range of drugs.

Illicit

Amphetamines (amphetamine, methamphetamine, MDMA, MDA)

Cocaine

Marijuana

Phencyclidine (PCP)

Opiates

Codeine

Morphine

Expanded Opiates

Hydrocodone

Hydromorphone

Oxycodone

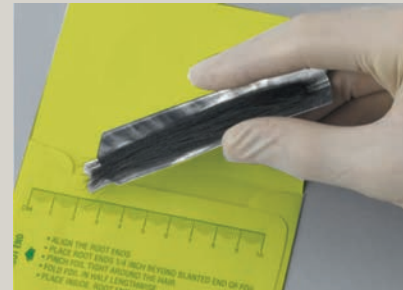

Oxymorphone

Convenient, non-invasive sample collection.

1. Collect.

Cut a sample of hair from the crown area of the head.

2. Package.

Place the hair sample in foil inside the envelope.

3. Document.

Seal the envelope and complete the chain of custody process.

4. Ship.

Package the specimen, envelope and forms, and arrange transportation to the laboratory for testing.

For more information about hair testing and how it can help you to create a drug-free workplace, contact your Quest Diagnostics sales representative today.
